Data Visualization Best Practices

Data Storytelling

Dashboarding and Deployment

Feb 26, 2022

MEHMET ERTURK

has successfully completed the online, non-credit Specialization

Use Tableau for Your Data Science Workflow

This specialization covers the foundations of visualization in the context of the data science workflow. Through the application of interactive visual analytics, students will learn how to extract structure from historical data and present key points through graphical storytelling. Additional topics include data manipulation, visualization foundations, audience identification, ethical considerations, dashboard creation, and report generation. Demonstrations of the basic visualization techniques used in Tableau will be included with a hands-on project.
